

THE ORIGINAL MONSTER STACKS

SINCELLO STATE

The 2019 Dynaflex Products Chrome Kit catalog features a fresh look, a fresh vibe, and a fresh... PATENT. Introducing seven new AK Lite technology, patented, bolt-on kits for some of the most sought after Kenworth, Peterbilt, Freightliner, and International trucks. We know this book will continue to be your go-to tool for the easiest to use, cleanest to install, longest lasting, and still KOOLEST made in USA chrome available.

KEEP IT SIMPLE COMPLETE VEHICLE KITS

In 2013 we launched the industry's first **EOLT-ON KIT** Catalog - stemming from a refreshed focus and commitment to "making it easy" to know what you or a customer might need, this **NEW** 2019 version changes the stack game, again. Bringing our **NEW** patented Air Kooled technology to almost **EVERY** new emission owner / operator dominated make / model combination in our same easy to use format. Bolt-on kits focus on:

- (1) DISTANCE BETWEEN THE BRACKETS
- (2) REQUIRED METHOD OF MOUNTING
- (3) ZERO DRILLING \$ ZERO FABRICATION

CUSTOM FIT YOUR KIT 8 HAND MADE STYLES

Our top stacks are standardized to make understanding your application as easy as possible. Our **OVERALL SYSTEM HEIGHT** applicator uses the length of the top stack and average truck top clamp centerline dimension for an easy to use **GUIDE** for exhaust setups between 11' and 14'. After determining the perfect kit and height combination, enjoy our offering of **ORIGINAL MONSTER STACK** and Signature Series Top Stacks. Follow these steps to get your fit:

- (1) FIND A KIT
- (2) PICK A DIAMETER
- (3) SYSTEM HEIGHT GUIDE (83)
- **(4) TOP STACKS** (85)

PRE EMISSIONS

America's first emission regulations were adopted in 1974, and California introduced their own regulations in 1987 that were several years ahead of the federal schedule. From there regulations steadily continued to grow stricter, and in October of '97 the EPA adopted new standards for the 2004+ heavy-duty models which coincided with California's more stringent regulations. These are commonly referred to as Tiers 0|1|2. For the first two tiers all emissions regulations were handled internally in the engine block and injection timing. Tier 2 however forced many engine manufacturers to factory install Diesel Oxidation Catalyst (DOC) mufflers to meet the imposed standards. These mufflers did not have the same opacity reduction as modern exhaust systems, but when compared to a 2002 engine, the 2004 had greatly reduced emissions. Tier 2 regulations also brought along the now near universal Ultra Low Sulfur Diesel (<15ppm).

2007 EMISSIONS

New standards were established by the EPA in late 2000 for on-highway 2007+ produced diesel engines. These regulations were targeted at reducing engine out Particulate Matter (PM) and Hydrocarbon (HC) emissions to near zero levels. The majority of engine manufacturers elected to integrate factory installed Diesel Particulate Filters (DPF) to accomplish this task. DPFs trap and combust upwards of 85% of PM and HC traveling in the exhaust mix and do so using a combustion process known as "filter regeneration." DPF's experiencing a regeneration cycle will reach peak temperatures of 1200°+F and average temps that are 40% higher than a standard or catalyzed muffler. These DPF only applications are found in 2007-2010 built motors.

2010+ EMISSIONS

As a result of EPA 2010 legislation, diesel engine manufacturers were tasked with not only reducing the PM levels tackled by 2007 legislation, but also with eliminating oxides of nitrogen (NOx) in the exhaust mix. Interestingly, NOx is increased inside the DPF during the PM/HC regeneration process, and starting in 2011*, NOx rich gas on the outlet end of your DPF is forced through a secondary neutralization process known as "Selective Catalytic Reduction (SCR)." All current on-highway SCR technologies utilize diesel exhaust fluid (DEF) to help the conversion of NOx rich gas into harmless chemical components. DEF dosing creates a more liquid heavy, highly corrosive exhaust environment in 2011+ built motors and reduces temperatures marginally when compared to 2007-2010 DPF only systems.

THE ORIGINAL MONSTER STACKS

Designed to reduce the noise levels of internal combustion engine technologies, both traditionally baffled and catalyzed mufflers will allow the "rolling of coal." What we would consider the glory days of truck engine manufacturing and emission control these motors run hydrocarbon and particulate matter rich exhaust mixes that line the inside of your Original Monster Stack system. This heavy thick coating of soot helps create gasketed seals at the system joints and reduces the creation of rust on the inside of your pipes. Our Original Z Series and standard Taper-Loc setups are ideal for truck body / motor combinations featuring muffler only control

PATENTED AIR KOOL

Exhaust systems used to be the simple part of an engine's operation and combustion process. That all changed in 2007 with the federally mandated integration of DPFs into on-highway diesel engine exhaust packages. Our sound altering, horsepower increasing, engine efficiency generating performance muffler became a PM/HC combusting, back-pressure creating, hot potato in your tailpipe. DPFs regenerating at 1200°+F causes downstream exhaust system parts and components to experience extreme heat cycles and virtually killed the option for chrome plated straight stack systems - unless you have the AK. Patented AK Lite systems are the only option for 2007-2010 DPF fit trucks

YOUR STACK CONNOISSEURS

If the 2007 temperature spiking DPF bomb wasn't bad enough, 2011 brought a whole new issue to the inside of your exhaust system, liquid ammonia. Branded as DEF, this highly corrosive to metal, hugely detrimental to chrome. widely sprayed new system component has made the kit prototyping process cornerstone to our customer's experience. Some 2011+ systems will require AK chrome temperature protection, while others just need our 2X taper series - reduce any headaches and trust the Dynaflex bolt-on kit for your truck.

YEARS 1961-1982

BRING THE OLD STUFF OUT ___

These A-model parts are something else. When JR from Lifetime Nut Covers hit us up to do this system we were amped. Have you seen the Barons? On top of that, we love working on old equipment and making exhaust cooler than we've made it before. This kit epitomizes what we've been trying to do for our customers and complete the truck's aesthetic in a way the OEM didn't make possible.

TURBO TO TAILPIPE

Although the DR kit doesn't come

standard with all chrome everything, if

you're as serious as this kit, our additional

chrome plated exhaust options might

interest you. Whether chrome turbo pipes,

elbows, clamps or polished out flex;

Dynaflex can get you show or road ready.

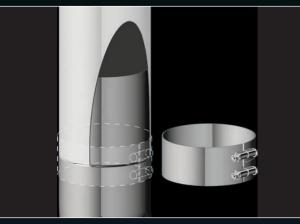

CUSTOM CHROME BRACKETS

This kit is exactly what anyone re-doing a classic A-model needs to have in their arsenal of after market chrome goodies. Like every system that fits right, we draw the right lines with the boxes and the steps with these double bent beauties. We do so by switching out an old OEM equipped frame bracket with a brand new chrome plated version that drops low and attaches to the y-pipe, positioning your system just right. Made in the USA, since 1972 - kind of like that A-model you got.

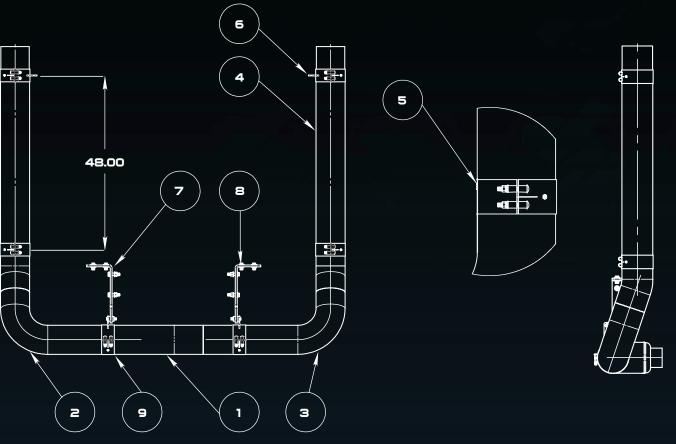

TAPER-LOC MODULAR CONNECTION

The Original 6", 7" and 8" Monster Stack systems were one piece. They were really hard to ship and the signature Dynaflex Taper-Loc connection was engineered to solve the problem. Taper-Loc allows for the modular flexibility of a 3 piece exhaust system, and when combined with correctly mounted 50 series clamps, gives a seamless look. The design relies on specific OD-ID pipe dimensions to create the most secure metal to metal connection in the industry. It's an often imitated but never replicated feature of our Z-Series chrome parts.

DYNAFLEX PRODUCTS

Keep your original KW styling but drop the elbow where it belongs - in line with the step and tanks. Hand bent in the same way we've been doing it for the last 40+ years, this elbow finds its design roots pretty close to the same era as the truck it fits.

. 50 SERIES \mid A BETTER CONNECTION $__$

When developing new kits for our customers, we try to think of every single thing. The re-engineered 50 series sliding bracket | clamp is a perfect example. Designed to hide as much of the hardware as possible, this new style W900L slider clamp and pin assembly is a huge improvement over the design utilized by Kenworth on 82+ W900L models. Another product offering only available from Dynaflex Products.

PICKETT DR | W900 REIMAGINED ___

Kenworth W900L long drop systems are a unique creation from Dynaflex products. These systems give KW guys a whole new option. Our original systems, which have been copied by everyone, bolted directly to the factory equipped frame bracket using u-bolts. Let's be real, unless it's an absolute necessity, let's try to never have you mount Dynaflex chrome with u-bolts, ever again. The KW940 and KW945 systems will change the factory mounting style to accommodate an elbow that drops low and draws the right line with your steps and tanks.

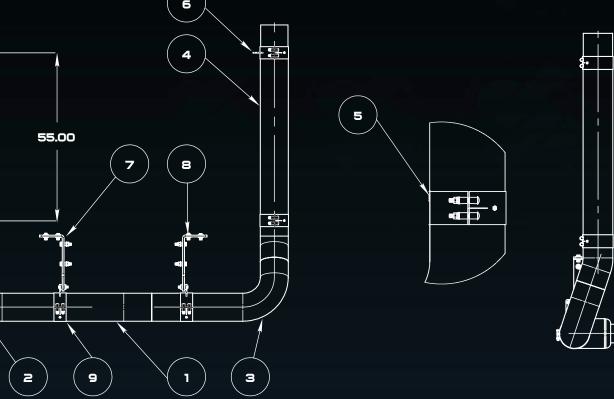

. 33DR Y | THE PERFECT FIT $\,_$

If you ever had the luxury of spending some quality time underneath the KW W900 models, you would attest to the lack of space in between the frame rails and underneath the cab. When designing these new kits we really had to thread the needle to fit that big full diameter y-pipe between the drive shaft and passenger side frame rail and plumb it back towards the engine.

50 SERIES A BETTER CONNECTION $_$

When developing new kits for our customers, we try to think of every single thing. The re-engineered 50 series sliding bracket | clamp is a perfect example. Designed to hide as much of the hardware as possible, this new style W900L slider clamp and pin assembly is a huge improvement over the design utilized by Kenworth on 82+ W900L models. Another product offering only available from Dynaflex Products.

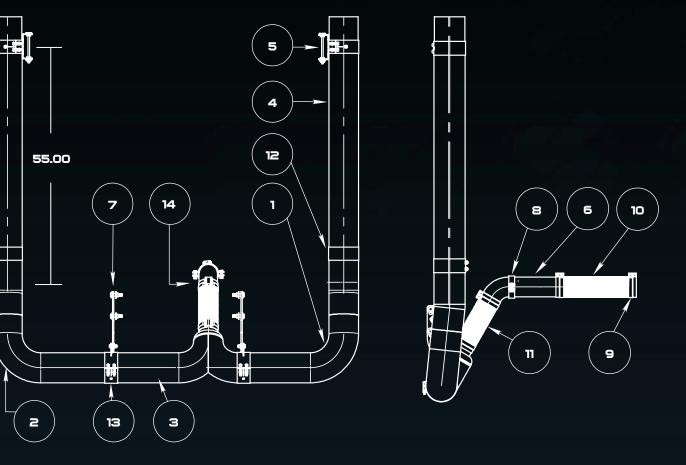

33DR Y | THE PERFECT FIT _

If you ever had the luxury of spending some quality time underneath the KW W900L models, you would attest to the lack of space in between the frame rails and underneath the cab. When designing these new kits we really had to thread the needle to fit that big full diameter y-pipe between the drive shaft and passenger side frame rail and plumb it back towards the engine.

100 SERIES BRACKETRY | CHROME EVERYTHING

COMPLETE PIPE WORK PACKAGE _

Systems ship complete with all the pipework required

from behind the mounted turbo pipe. Your pipework

package makes the job cleaner and easier. The included

accessories eliminate the need to reuse rusted parts.

The Dynaflex chrome frame bracket only shares one feature with the OEM version, the hole pattern. Featuring a uniquely profiled design that matches the hanging support clamp bracket, this new 100 series part transforms your W900 into the ultimate canvas for our Original Monster Stack chrome.

PICKETT DR | W900 REIMAGINED

Kenworth W900L long drop systems are the newest creation from Dynaflex Products. These systems give KW a whole new option. Our original systems, which have been copied by everyone, bolted directly to the factory equipped frame bracket using u-bolts. Let's be real, unless it's an absolute necessity, let's try to never have you mount Dynaflex chrome with u-bolts, ever again. The KW940 and KW945 systems will change the factory mounting style to accommodate an elbow that drops low and draws the right line with your steps and tanks.

PACKAGE. SEE BOM FOR DETAILS. ADD [Q] TO KIT FOR QUIET SPOOLS.

TAPER-LOC MODULAR CONNECTION

The Original 6", 7" and 8" Monster Stack systems were one piece. They were really hard to ship without damage and the signature Dynaflex Taper-Loc connection was engineered to solve the problem. Taper-Loc allows for the modular flexibility of a 3 piece exhaust system, and when combined with correctly mounted 50 series clamps, gives a seamless look. The design relies on specific OD-ID pipe dimensions to create the most secure metal to metal connection in the industry. It's an often imitated but never replicated feature of our Z-series chrome parts.

TURBO TO TAILPIPE

Although the DR kit doesn't come standard with all chrome everything, if you're as serious as this kit, our additional chrome plated exhaust options might interest you. Whether chrome turbo pipes, elbows, clamps or polished out flex; Dynaflex can get you show or road ready.

DYNAFLEX BUSHING

Based on the support requirements of a Dynaflex Original Monster Stack kit, the Dynaflex B4656 bushings durometer is harder than its OEM counterpart. Every Z-Series kit using 50BJ-PB clamps and 359/379 cab brackets includes our high quality bushing pack.

CHROME PLATED STAINLESS STEEL

Our 14 series brackets and 50 series clamps are manufactured using high quality 304 stainless steel to provide the proper support. After being polished, they are chrome plated using the highest quality materials available. Some companies supply nonchrome plated clamps and after a few duty cycles they turn yellow. When you expect your investment to not only fit the best, but look the best, look for the DP.

We love that trucks are different. The nuances of each model are what gives them character and we would never want to subject you to a one option approach. For this reason, Dynaflex Pickett and DR kits for 359, 379, and 389 glider trucks feature elbow lengths specifically designed to run the right bottom line with your tanks and boxes, as well as, bracket locations that are ideal for the side view of the system. Don't mess around with one system imitators get a system designed, made, and supported in the USA - specifically designed for your Peterbilt.

33 DR Y PIPE

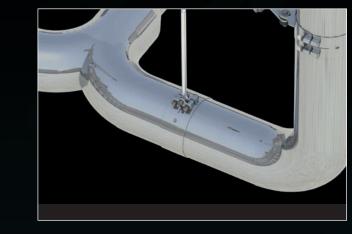

The 33DR is the most serious Y pipe in the game. Built with two 7" or 8" Taper-Loc'd ends and a 5" reduction, the 33DR is the key ingredient of the whole DR kit. Engineered for a perfect fit right between the frame rails, the elbow / y-pipe connections disappear behind 50 series clamps (48CH). Chrome plated like every other Dynaflex Monster Stack, this Y pipe will look just as good as the rest of your exhaust. If every detail must be perfect, the KDR is the kit for you.

SUPPORT HANGERS

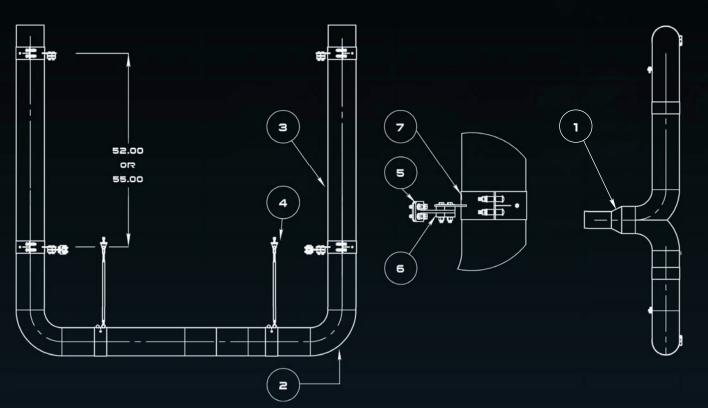

The 48CH hangers is a tech addition to the ever growing Dynaflex chrome exhaust line. Utilizing a 50 series clamp at the end of the polished stainless hanger, the 48CH does two jobs. First, it hides those two Taper-Loc'd connections; while secondarily supporting the additional weight of

that full diameter, awesome new 33DR y-pipe.

KIT APPLICATION BODY DAYCAB

ELBOW DR STEP MOVE

YEARS 2011-2017

The Dynaflex 2X series was developed for DPF + SCR equipped vehicles that use DEF. Not much more than additive enhanced ammonia, DEF creates a liquid filled exhaust system that we have had to design our new pipe systems around. The beauty of the 2X series is it keeps the functionality of the 3 piece Taper-Loc'd systems we innovated, while eliminating any after treatment slurry from escaping the lower connection seams. If you have ever seen the quality of a one piece plated system, or lack thereof, the 2X series solves the problems without sacrificing the look of your chrome.

The 389 short hood is one of the most sought after kits we've had in awhile. What most of us know as a 388, these new short hood Peterbilt 389's are factory equipped with over the frame exhaust that features some funky looking chrome elbow covers, hovering a massive emission control box (that's in the way). Answering your call, this kit provides brackets that move the def tank, emission control box, and allows for brackets to be mounted that will support your favorite Peterbilt part, the Pickett style long drop ninety degree elbow.

STEP MOVING BRACKETS

So you want Rod Pickett Elbows? Then your SCR and DPF systems will need to move forward 2" to accommodate that nice looking 90. Luckily, these two ½" thick plate brackets can handle that 400LB step. Don't cut, weld, or modify anything on the step-bolt these on and move on.

EVEN FLOW Y PIPE

If the KRPP DPF | SCR Step Moving Kit wasn't bad-ass enough for you already - wait until you get your eyes on this massive y-pipe. The factory 389 exhaust seems to like to only heat up one side of your pipe system so we made sure to even the flow out with a unique internal baffle. Solving problems, and making your whip look better, that's how we roll.

NEW CHROME MIRROR BRACKETS

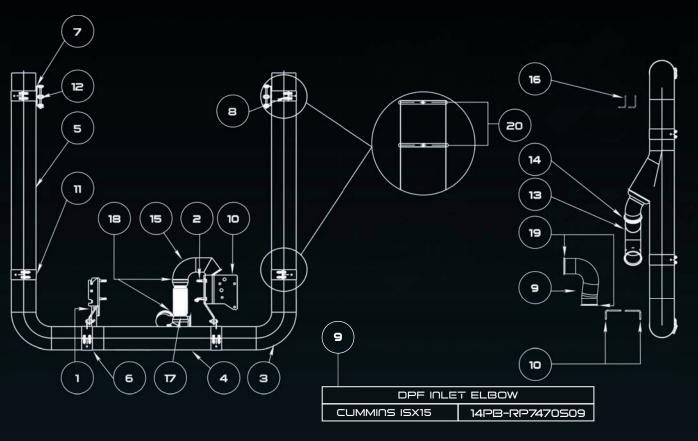

New for 2018 our 389 RPP system frame bracket got a fresh look that makes your chrome on chrome connections even cooler. A custom pin marked DP logo makes it too easy to tell you're getting the right stuff, the 2018 389 RPP REMIX exhaust system always made 100% in the USA, by Dynaflex. Hard to know what your favorite part of our remixed 389 system will be, but we'd place a bet these chrome on chrome on chrome frame brackets and connections are high on your list.

The beauty of the 2X series is it keeps the functionality of the 3 piece Taper-Loc'd systems we innovated, while eliminating any after treatment slurry from escaping the lower connection seams. If you have ever seen the quality of a one piece plated system, or lack thereof, the 2X series solves the problems without sacrificing the look of your chrome.

AIR RIDE SLIDE CLAMP

New for this remixed kit is our "Pull through" version of the air ride sliders - stronger, steezier, and even harder to copy than the ones before, these clamp mount directly to the OEM bracket using supplied RP adapter plates. Now boasting a stronger more supportive bushing / pin assembly, these are some of the most tech clamps to ever leave our doors.

ENGINEERED DPF INLET ELBOWS

Crafted for your new system's placement on the frame, our different inlet pipe configurations allow your system to be seamlessly integrated onto any 389 platform engine option.

STEP MOVING BRACKETS

So you want Rod Pickett Elbows? Then your SCR and DPF systems will need to move forward 2" to accommodate that nice looking 90. Luckily these two 1/2" thick plate brackets can handle that 400LB step. Don't cut, weld, or modify anything on the step - bolt these on and move on.

We are always making improvements. Even though this system has set the bar for a 389 Peterbilt since 2011 - the bar just got raised again. Our "No drilling, no fabrication, no worries" step moving kit has received a sexy face lift. Now equipped with our signature flat pattern frame brackets and newly designed pull through support brackets for increased clamp pin/bushing support - this system is cleaner and easier to install than ever before.

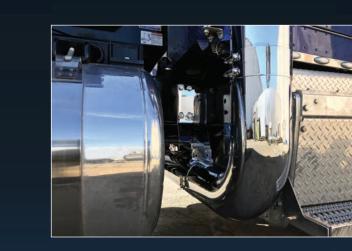

EVEN FLOW Y PIPE

If the KRPP DPF | SCR Step Moving Kit wasn't badass enough for you already - wait until you get your eyes on this massive y-pipe. The factory 389 exhaust seems to like to only heat up one side of your pipe system, so, we made sure to even the flow out with a unique internal baffle. Solving problems, and making your whip look better, that's how we roll.

HOW HIGH?

STANDARD LENGTHS

We are here to help you get the most out of your Monster Stacks system, and that includes figuring out how high you want it to sit. If you don't already have a kit and are running stock exhaust, take a look at the standardized stack length x series chart to determine which will be the right fit for you. Trucks with low air and/or low profile tires will generally run below the table we created by series. To determine which top stack length fits your usage, run a tape measure from the center point of the top bracket, add the length of the top you're considering, and then divide by 12. Once set on an overall height, have fun finding which of our eight styles fits your truck!

Explore Your Options & FIND THE RIGHT FIT FOR YOUR KIT

BULL HAULER WESTERN CLASSIC

A functional design developed with cattle haulers in mind, Bull Haulers diffuse exhaust fumes into the air rather than trailer, keeping harmful substances away from livestock. Due to their versatility and aggressive aesthetic, our Signature Series Bull Hauler sets the tone for any ride.

CALIFORNIA STYLE

Originating in California, the Signature Series Chino stack was developed for a customer, ironically out of Chino, who wanted to send smoke away from his ride. We added a stylized spin on our Original Monster Stack design to create a distinctly Dynaflex stack showcasing our unique ability to cut, weld, polish, and plate.

DP CURVE A DYNAFLEX ORIGINAL

Imitators call it the California or West Coast Curve, we know it as the Dynaflex Curve. Featuring a 45 degree bend cut after tangent and round opening, this stack gives you the sleek bent look you're after. An identifiably Dynaflex design, it comes as no surprise why replicators would associate their knock off variations with the home of the Original Monster Stacks.

FLAT TOP

THE OG MONSTER STACK

Founder Gil Contreras made sure the functionality was right when developing the very first style of Original Dynaflex Monster Stacks in the 1980s. In fact, Gil was so focused on the sound altering function of his new innovation, he nearly forgot about the chrome. Luckily for us all, his wife Dolly never forgot the aesthetics, and reminded him the first stacks had to be "shiny" too. Whether you're after an old school touch or mean look, a set of Straights will do the job and look good too.

OZZIE CURVE A FAMILIAR TWIST

The Signature Series Ozzie Curve features a unique profile and opening due to its 30 degree cut back into tangent. A tribute to Ozzie's, a local diner frequented by Dynaflex's founders, and ironically truck drivers passing through, this versatile curve looks sleek on any ride.

The patented Air Kooled Lite Series (AK) combines more than 45 years of experience constructing the highest quality exhaust systems utilizing modern processes and materials bringing you our most technologically advanced product offering to date. Built and road tested to meet the rigorous demands of today's diesel engine technologies, AK systems have been tested in applications consistently exceeding 1000° with no discoloration or degradation of our never duplicated chrome finish.

Combining our patented technology with a dedication to no drilling, no fabricating - bolt on Kits - we are excited to release some long overdue aftermarket options for trucks with exhaust temperature profiles outside of the acceptable range for any standard plated product (650°) or gimmicky coating.

WARRANTY CONDITIONS AND CARE

CARE

There are a few ways to keep the chrome on your system looking the way it did when you just got it. Most importantly, whether it be weekly, bi-weekly or monthly, clean your stacks on a consistent basis that is geared towards your duty cycle. Stacks exposed to rough conditions should be cleaned on a daily basis, particularly in winter months when they are most exposed to salt or magnesium chloride. When washing your stacks, use a new microfiber rag, warm water and a lot of mild soap. Between washes, coat your stacks (especially at the elbows) with a spray wax of your choice for an extra layer of protection and to enhance the brightness of your chrome.

Below you'll find a standard warranty statement addressing issues faced by trucks OEM equipped with any level of emission control.

WARRANTY CLAIMS

Dynaflex Products warrants all products and/or component parts sold conform to the specifications and physical descriptions contained in Dynaflex Products literature including, but not limited to, product catalogs, flyers or individual sale sheets. The Limited Warranty appearing on Dynaflex Products literature is exclusive and in lieu of all warranties whether written, oral or implied, including any warranty on fit or purpose.

LIMITED WARRANTY

Dynaflex Products are warranted for one year from date of purchase with proof of purchase only. If proof of purchase cannot be supplied, the Limited Warranty will cover defects in material and workmanship from date of shipment. Defects due to accident, neglect, corrosive environments or other abnormal service conditions void the Limited Warranty. This warranty applies to and is for the benefit of the original purchaser only.

NEGLECT OR ABNORMAL CONDITIONS

Chrome that is exposed to rock salt on snowy road conditions for an extended period of time will corrode, crack, chip, and peel the chrome. Chrome must be cleaned intermittently to remove any corrosive materials.

AK systems are the only systems Dynaflex Products can warrant for trucks with 2007+ engines. 2007+ engines with DPFs will run very hot (1200 degrees) — the AK system is the only system that can properly handle that amount of heat. If the DPF has been removed from a 2007+ factory fit system, the Limited Warranty for chrome will be voided. 2007+ engines have engine programming that makes them burn rich — removing the DPF causes un-combusted Hydrocarbons to discolor and harm the chrome. Dynaflex Products is not responsible for holding warranty on trucks that have changed from their OEM exhaust design.

2010+ exhaust systems contain Selective Catalytic Reduction systems that use DEF (ammonia) to neutralize NOx. Ammonia is an environmental contaminant and can discolor chrome if not cleaned. SCR systems may let small amounts of aqueous ammonia out the tailpipe. Cleaning the tips of your tailpipes will ensure your chrome lasts. DPF/SCR systems that are improperly maintained may void your chrome warranty. DPF systems need to be cleaned every 1,000-1,500 operating hours. Failure to do so may cause your exhaust system to reach temperature levels chrome cannot withstand.

SYSTEMS

Dynaflex Products innovated the three piece (Z-Series) stack design and can only warrant complete kits. We cannot warrant, for example, a Dynaflex Products elbow used with an import spool. We cannot guarantee the Taper-Loc joint will seal correctly if not using a complete Dynaflex Products kit using the appropriate Dynaflex clamps, brackets, spools, elbows, tops, and any other associated exhaust subcomponents.

This warranty is limited to the provisions shown and Dynaflex Products does not assume responsibility for the cost of removal or installation of the product, or any consequential expense.

Should the product appear to be defective within the warranty period, it should be returned to the dealer that the parts were purchased from. If their inspection confirms the product failed as result of material or workmanship and Dynaflex Products accepts responsibility, the product will be replaced at no charge.

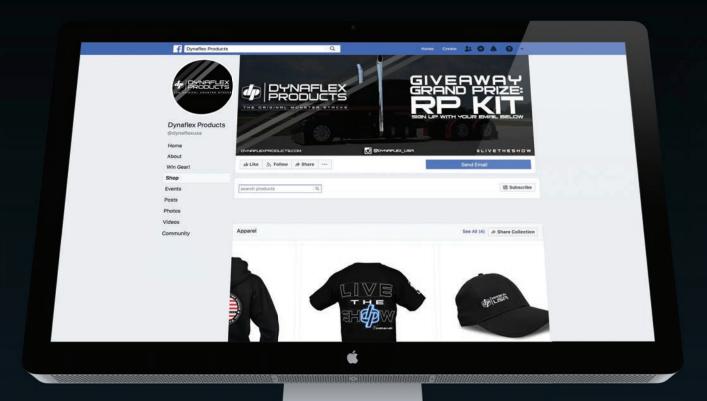

RETURNS

A written copy from Dynaflex of the Return Goods Authorization (RGA) is required prior to returning parts. All returns must be prepaid shipped to Dynaflex Products in Commerce, California and include the RGA clearly and boldly marked on the outside of the shipping box(s) or shipment may be rejected. RGAs are only valid for 30 days after being issued. Parts received after this return period will be rejected. All shipping costs, including duties, brokerage fees, drayage, etc, will be at purchaser's expense.

Z SERIES KIT APPLICATION

If you took the OEM mufflers off your exhaust system to install your new kit, remember you can add muffler inserts into the spools by adding a "Q" after the dash and before the first character. It will ship with a bill of material so you know exactly what was shipped. Ex: KV-805052CP / KV-Q805052CP
